Topos Technologies releases version 4.6 of LabSpeed™ with Intelligent Automated Output

LabSpeed™ Data Management software provides a common platform for charting, reporting, exporting, archiving, and sharing results generated from all types of analytical instruments used in a laboratory, from benchtop and hand-held devices to multi-element analysis spectrometers and bio-tech instruments.

Marlborough, MA – July 30, 2008 – Topos Technologies announces the release of version 4.6 of its LabSpeed Data Management software. Version 4.6 adds real-time data source monitoring and provides automatic exporting and automatic printing capabilities required in production and process control environments.

Automatic exporting and printing can be used to send data to all parts of an organization and can be setup to send selected data in different formats to different locations. For example, data can be sent in one format to a company LIMS or ERP system and exported again in a different format for use by a local third-party application.   Reports can be sent to multiple printers and different reports can be assigned to different printers.

Selection criteria may be assigned to filter samples saved by the instrument software in order to control what types of samples are automatically exported and printed. Output can be queued to maximize the number of samples that fit on a page, which can save a significant amount of paper, or to send groups of samples to other third party software.

Real-time data source monitoring is a valuable tool in any production environment that requires flexible control over the data output and that needs to run securely 24 hours a day, 7 days a week.

LabSpeed provides chart, report and table end-user designers that allow the analyst to solve most common data handling problems found in the laboratory, such as applying formulas, creating specialized data formats for export to LIMS and creating custom reports to satisfy strict regulatory requirements. Now, with version 4.6 analysts can automate the output of instrument data to all parts of an organization.

Visit http://www.topostech.com for complete information and to download a 30-day trial version of LabSpeed Data Management software.
###

Founded in 2004, Topos Technologies is a software development company focused on solving data management problems in the analytical lab. Topos works with instrumentation companies who require state-of-the-art data management for their customers' processes, including data security, data research, data exporting, and data presentation. Topos contracts directly to laboratories to provide customized solutions for factory automation and real-time data monitoring, and to build custom interfaces to external devices and software. The company holds a wealth of knowledge in the area of instrumentation applications and laboratory integration and has extensive experience working with large instrumentation companies.
